

Capability Statement

AI integrated with systems of record

Woman-owned small business • ironbrick.us

Company Overview

Founded in 2002, Iron Brick (formerly InfoPath) is a focused systems integrator and U.S.-based professional services firm driven to simplify and maximize the value of our clients' information. Iron Brick provides API, SOC, MDM, and PIM architecture and implementation; AI data governance and analytics; digital transformation and management; data integration; enterprise hosting; and operational services for large enterprises in the federal civilian, state, DoD, and financial sectors. Today we focus on connecting AI to authoritative records through governed APIs and the Model Context Protocol (MCP), so every answer can be traced to its source.

Core Competencies

- **AI grounded in systems of record** – retrieval and agent tools on governed APIs, with citations and per-user access control
- **API-led integration** – MuleSoft system, process, and experience APIs that unlock legacy and cloud systems for reuse
- **AI agents and MCP** – agent registry, broker, and gateway; APIs exposed as governed MCP tools
- **AI data governance and analytics** – pipelines, data quality, lineage, and Databricks analytics
- **MDM and PIM** – master data and product information architecture and implementation
- **Security operations** – zero trust design, API security, SOC/SIEM integration (Splunk), PII/PHI protection
- **AIOps and operations** – event correlation, anomaly detection, enterprise hosting, and operational services
- **DevOps and C4E** – CI/CD, infrastructure as code, and a Center for Enablement your teams can own

Past Performance

- **Federal:** U.S. Food and Drug Administration (FDA); HHS Administration for Children and Families (ACF); HHS Office of Refugee Resettlement (ORR); U.S. Department of Housing and Urban Development (HUD); U.S. International Development Finance Corporation (DFC); U.S. Department of Veterans Affairs (VA) and Department of the Navy (as InfoPath)
- **Defense:** National Guard (delivered by Windward Technology Group, founded by Iron Brick's principal)
- **State:** State of California; State of Illinois
- **Commercial:** Bank of America; Paradies

Engagements delivered by Iron Brick architects, directly and as part of prime contractor and platform partner teams.

Differentiators

- **Integration first.** AI is treated as an integration problem, so results are defensible in an agency setting.
- **Senior, certified architects** who have led large integration practices for federal and Fortune 500 clients.
- **Security operations background:** SOC, data center, SIEM, endpoint, and firewall experience designed in from the start.
- **Built to team:** U.S.-based staff, Iron Brick delivery accelerators, and a record of subcontracting to large primes.

Delivery Approach

Assess the systems of record, data, and security baseline → **Strategize** a target architecture and prioritized use cases → **Execute** in short, tested increments with runbooks and team enablement.
